DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10/16/2006 has been entered.

Allowable Subject Matter

Claims 55-60 allowed.

The following is an examiner's statement of reasons for allowance:

In regards to independent claim 55, the prior art of record fails to anticipate or rendered obvious the combined elements/steps of, "wherein said plural entertainment devices are interconnected via a synchronization channel and a status change information transmission channel", in conjunction with "said synchronization signal being a synchronization signal component contained in picture signals of the other entertainment device" as recited in the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

The examiner notes Figure 7 provides an overview of the system, where two game machines are communicating through both a status change information channel 82 and a synchronization information channel 92, where the synchronization information is contained in the pictures signals of the other entertainment device. The prior art previously cited by the examiner (Berner) clearly discloses a status change information (18) and a synchronization information (16), however, Berner fails to disclose that at least one of the entertainment devices outputs picture signals in synchronism with synchronization signals. Berner only discloses receiving picture signals with synchronization data (game data and results), not outputting them. Furthermore, as cited by the examiner, the prior art teaches various types of entertainment devices that are interconnected to each other (Hochstein, Barker, Bakoglu) only provide status change information to one another and fail to teach outputting pictures signals to one another, which contain both the picture signals and accompanying synchronization information. In addition, the prior art submitted by the Applicant only teaches that the exchange of synchronization information is conducted, which cause the game/entertainment devices to synchronization the common display of a game on the multiple entertainment devices. The cited prior art fails to teach the use of both status change information in addition to synchronization information transmitted between entertainment devices, let alone that the synchronization information is a component contained in pictures signals (outputted from one of the entertainment devices to another entertainment device) of the other entertainment device.
